

Corey Golcman

Dallas, TX | 469-465-4382 | coreygolcman@tamu.edu | [linkedin.com/in/corey-golcman](https://www.linkedin.com/in/corey-golcman) | bit.ly/coreyg-portfolio

EDUCATION

Texas A&M University, College Station, TX
Honors Mechanical Engineering Student, GPA 3.5

May 2027

TECHNICAL SKILLS

- **Design:** SolidWorks, Fusion 360, CATIA, GD&T, DFM
- **Simulation:** SolidWorks Simulation, MATLAB, Simulink, Ansys, FEA, fatigue analysis
- **Manufacturing:** CNC Mill, CNC Lathe, SLA, FDM
- **Electrical:** Industrial DIO, Circuit analysis, KiCAD, PCB design, LTspice
- **Automation & CV:** Industrial vision, OpenCV, Jetson Edge computing, PyTorch, Anomalib

WORK EXPERIENCE

Accelerated Solutions Group, Automation Engineering Intern, Tomball, TX **June 2026 – Present**

- Creating an autonomous quality control station to detect defects on formed ABS sheets, selected proper image sensor, lens, industrial lighting and computer hardware
- Deployed and trained an anomaly detection model on NVIDIA Jetson Orin AGX hardware, setting up the full software development environment to run real-time inference in the QC station
- Deploying and integrating a robotic arm that sorts ABS sheets, coded its path and logic, used relay control for industrial DIO and created a custom vacuum gripper to interface with the plastic sheets

Alt-Bionics, Robotics Engineering Intern, San Antonio, TX **June 2025 – August 2025**

- Used SolidWorks CAD and kinematic analysis to advance the mechanical design of a next-generation robotic hand through the addition of an actuated splay motion, increasing the DOF from 6 to 10
- Designed and fabricated custom strength testing fixture to support product validation and QA using SolidWorks CAD, CNC Machining and additive manufacturing

Smurfit Westrock, R&D Engineering Intern, Irving, TX **June 2024 – August 2024**

- Completed specialized training in Abaqus FEA software to evaluate product and material performance under diverse conditions, supporting robust and reliable design solutions
- Contributed to the setup and efficient operation of an additive manufacturing lab, installing hardware, programming CNC machines, and troubleshooting 3D printing failures to drive successful prototyping

PROJECT & LEADERSHIP EXPERIENCE

TAMU Formula IC, Throttle Control Engineer, College Station, TX **May 2026 – Present**

- Pioneering team's first transition from cable-actuated to electronic throttle control (ETC) system which includes the accelerator pedal, throttle body, sensors and custom safety circuitry
- Engineering a custom PCB for sensor fault detection using KiCAD and LTspice
- Engineering a highly compact and lightweight accelerator pedal that withstands expected loading conditions

TAMU Formula Electric, Drivetrain Engineer, College Station, TX **May 2025 – April 2026**

- Engineered custom drivetrain components including sprockets, motor shaft, and chain guard performing design compliance, material selection, GD&T, and assembly integration
- Executed static, dynamic, and fatigue FEA using SolidWorks Simulation to validate structural integrity, fatigue life and factor of safety

ADDITIONAL INFORMATION

- CSWA in Mechanical Design - *Dassault Systemes*
- Foundation Excellence Award Scholar – *TAMU Foundation & The Boeing Company*
- HSF Scholar – *Hispanic Scholarship Fund*
